

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

~~Su~~ 1. (Previously Presented) A communication breaking device for interrupting communication of a communication apparatus which modulates or demodulates information being communicated with a predetermined code sequence, said communication breaking device comprising:

code sequence extracting means which is capable of extracting the predetermined code sequence from a received incoming wave;

code sequence inverting means which is capable of inverting the code sequence extracted by said code sequence extracting means into an inverted code sequence;

phase control means which is capable of advancing the phase of the extracted code sequence or that of the inverted code sequence; and

breaking-wave transmitting means for transmitting the inverted code sequence having the advanced phase as a communicating breaking wave so as to obtain a communication breaking space.

2. (Previously Presented) A communicating breaking device according to claim 1, wherein phase advancing is performed by said phase control means in a quantity corresponding to at least one code of the extracted code sequence or the inverted code sequence.

3. (Previously Presented) A communication breaking device according to claim 1,
wherein said breaking-wave transmitting means comprises electric-power amplifying means
which is capable of controlling an amplification gain.

4. (Previously Presented) A communication breaking device according to claim 2
wherein said breaking-wave transmitting means comprises electric-power amplifying means
which is capable of controlling an amplification gain.

5. (Previously Presented) A communication breaking device according to claim 1,
wherein said breaking-wave transmitting means intermittently transmits the communication
breaking wave.

6. (Previously Presented) A communication breaking device according to claim 2,
wherein said breaking-wave transmitting means intermittently transmits the communication
breaking wave.

7. (Previously Presented) A communication breaking device according to claim 3,
wherein said breaking-wave transmitting means intermittently transmits the communication
breaking wave.

8. (Previously Presented) A communication breaking device according to claim 1,
wherein the incoming waves are transmitted from a plurality of the communication
apparatuses.

9. (Previously Presented) A communication breaking device according to claim 2,
wherein the incoming waves are transmitted from a plurality of the communication
apparatuses.

Claim 9
10. (Previously Presented) A communication breaking device according to claim 2,
wherein the incoming waves are transmitted from a plurality of the communication
apparatuses.

Claim 10
11. (Previously Presented) A communication breaking device according to claim 4,
wherein the incoming waves are transmitted from a plurality of the communication
apparatuses.

12. (Previously Presented) A communication breaking method adapted to a
communication method which modulates or demodulates information being communicated
with a predetermined code sequence, said communication breaking method comprising the
steps of:

compensating the code sequence in an incoming wave by transmitting a
communication breaking wave so as to obtain a communication breaking space.

13. (Previously Presented) A communication breaking device according to claim 1,
wherein the communication breaking device is constructed and arranged to operate with a
portable telephone system.

Bell
Cont.*

14. (Previously Presented) A communication breaking device according to claim 1, wherein the communication breaking device is constructed and arranged to operate with a CDMA (Code Division Multiple Access) system.

15. (Previously Presented) A communication breaking method according to claim 12, wherein the communication breaking method is adapted for use with a portable telephone system.

16. (Previously Presented) A communication breaking method according to claim 12, wherein the communication breaking method is arranged to operate with a CDMA (Code Division Multiple Access) system.
